

DeFI – liquidity for social projects

just be a part of the social HCO

buy the social token

your donation

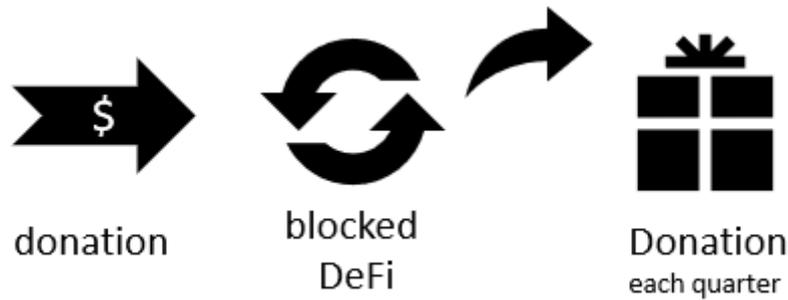

WHITEPAPER The Social Token

The Social Token

What is the Social Token?

The Social Token is the first decentralized project that generates liquidity through firmly anchored assets. The liquidity is deposited and secured in decentralized blockchains and their protocols.

The revenue generated is made available to humanitarian institutions and purposes at regular intervals without affecting basic liquidity.

Basic liquidity, i.e. basic assets, is built up through the sale of the Social Token. In addition, the basic assets are to be increased through donations in the form of cryptocurrency.

What is the purpose of the Social Token?

Our goal is to generate liquidity for humanitarian projects and to support them. Income is generated without the use of fiat currency in the field of cryptocurrency trading.

Furthermore, there is the opportunity to receive, invest and manage cryptocurrency as a donation for any humanitarian and social organizations with the help of the Social Token.

Depending on the arrangement, the donations or the generated liquidity in the form of crypto currency or fiat currency are given to the organizations as a donation via trustee or a trust.

How can you benefit from the Social Token?

It is possible to have fiat currency exchanged for cryptocurrency through various exchanges and trustees. In return, the Social Token can be delivered to a wallet address or held in an escrow account. No Social Token is delivered for donations.

The Social Token is backed by liquidity. However, there is no entitlement to this liquidity through possession of the Social Token. Not even through trading on centralized or decentralized exchanges on the crypto market.

A market value for the Social Token is neither predicted nor guaranteed. However, it is possible to participate in price fluctuations by owning the Social Token and trading it.

Who created the Social Token?

The Social Token was launched by the founders of Krypto Suisse AG, Be Globe AG (formerly Horizon Global) and the founders of the Bitcoinpos team. What they all have in common is a decade of commitment in social areas.

Number and distribution of Social Token

Since everyone has a right to help and is therefore entitled to at least one Social Token, a unit number of 7.9 billion tokens was initially issued.

World population as of November 27, 2021 <https://www.worldometers.info/world-population/>

100 million tokens are held by the Bitcoinpos team for their community as well as for 10 to 1 deposit of another crypto currency.

400 million tokens are available for sales activities and purchases against fiat currency through a trust asset manager.

400 million tokens are available for an **HCO**, a **H**umanitarian **C**oin **O**ffering, via cryptocurrency.

7 billion tokens are blocked. As of November 27, 2021

Information on the blockchain

The BNB blockchain was chosen due to the favorable cost structure for trading and transfer.

The social token is based on a published and therefore viewable source code.

By choosing the BNB blockchain, everyone has the opportunity to receive, store, trade or send the token in Metamask, TrustWallet etc. Metamask and Trustwallet are freely available and decentralized. The costs for the programming were borne by the founders.

Further information on the blockchains in which the liquidity is stored, as well as the receiving and trading addresses of the blockchain, are publicly available at <https://social-token.eu/assets/>.

Transparency

Transparency is the number one priority for the Social Token. For this reason, management via blockchain is the first choice.

The blockchain addresses of the liquidity and the Social Tokens as well as their codes are publicly available.

The distribution of liquidity to projects is decided by a committee. Projects can be submitted by anyone.

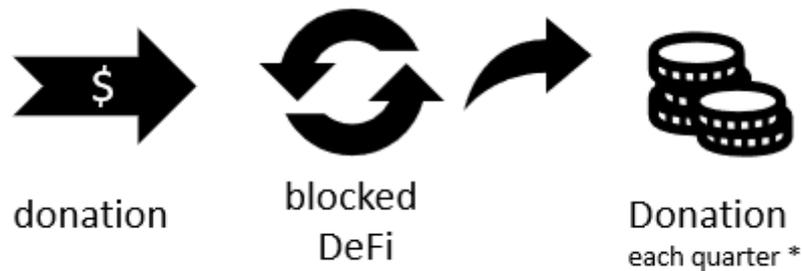

The individual members of the committee may not receive any personal benefit from the decision. The transfer of liquidity can be tracked via the blockchain.

When converting to fiat currency, the trustee / trust can clearly prove that the liquidity was made as a donation.

The social Token 3.0

In order to be able to offer added value to non-profit and humanitarian organizations, they have the opportunity to receive donations in the form of cryptocurrency to blockchain addresses specially created for them.

The blockchain enables the greatest possible transparency for the organizations, as every transaction is clearly traceable. Cryptocurrencies such as USDT, BTC, ETH and many more can be displayed and received immediately.

The Social Token offers to exchange the crypto donations for EURO or USD via trustee. The donations are transferred to the organizations via bank transfer with receipt of the donation in order to fulfill their purpose.

Responsibility and competence

The Social Token is a decentralized project in the crypto market and is left to itself as far as it is technically possible.

In the future, liquidity will be managed by a trust to be set up for this purpose. The trust's sole task is to manage the assets in a fiduciary capacity.

Krypto Suisse AG will take over this task until the time of handover to this trust.

Competencies and responsibilities are published on <https://social-token.eu/>
